STATOTHR

This visit was made to ascertain the status of the spatial filtering viewer and to discuss with the progress on the experimental and theoretical program dealing with photographic edges. The viewer is completely assembled and operational, with the two new spatial filters installed. The viewer was operated in all possible modes and performed satisfactorily. Some photographs are attached.

The delivery of this instrument was discussed. It is understood that after 30 January 1964, the equipment is to be shipped at our rejuest. Boxes are or will be ready for crating the equipment. Returning the equipment used on previous contracts was also discussed.

The operating and maintenance manual has been completed, and is presently being published. They estimate it will be ready by about the first week in February, considering the known progress of such things through the publication group at Itek. If completed on time, they will be sent with the instrument; mailed separately otherwise.

STATOTHR

The experimental program is continuing. Progress to date has been good, and most of the spatial filtering experimentation has been completed. The side study by has been finished, the results still being evaluated. It was decided that the final report on this work would be held off so that as much experimentation as possible could be effected. The report, while in written form, is to be in Omalid copy; nothing funcion. It is expected that this will be completed about two weeks after the instrument has been sent.
